Databricks Kickstarter

Prove the Value of Databricks Fast

You see what Databricks could do for your business. But before you commit to a larger investment, you want proof that it can solve a real problem.

Our Databricks Kickstarter provides a focused, 1-3 month engagement built around one high-value use case, clear success criteria, and measurable results.

We'll help you quickly move from business objectives to a working solution, giving you tangible evidence of value and a practical path forward for scaling Databricks.

Phase 1

Setup & Scope

Define the use case and success metric, establish the workspace, ingest representative data, and validate connectivity and baseline performance.

Phase 2

Build the Core Pipeline

Create a Delta-based data pipeline, perform targeted transformations and modeling, and validate data accuracy and usability.

Phase 3

Demonstrate Value

Develop one priority analytical output or model and compare the results with your current approach across speed, simplicity, and cost.

Phase 4

Optimize & Recommend

Apply initial optimizations, measure results against success criteria, and deliver recommendations and next steps.

Why Datavail

Datavail, a Databricks Consulting Partner and home to multiple Databricks MVPs, supports your full Databricks lifecycle. Our team has more than 20 years of data platform and application development experience, over 1,000 consultants focused on cloud deployments and managed services, and Databricks-certified sales and technical resources.

Ready to Put Databricks to the Test?

Start with one use case, 1-3 months, and a clear measure of success.
