

# AWS Database Migration Jump Start For Aurora

Industry trends continue to show strong growth in organizations migrating from on-premises to the AWS cloud-based Database-as-a-Service offering.

Datavail sets itself apart from the competition with our tech-enabled IP and tailored solutions that are scalable and flexible to the needs of clients, from SMB to enterprise-sized. An effective Migration Jump Start sets the foundation for a successful migration and is often the most important component when considering a migration from on-premises to Amazon Aurora.

New Aurora Workloads

# Jump Start Elements of Success

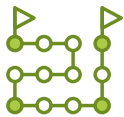

## Cloud Readiness Assessment

Datavail delivers a comprehensive assessment of the hardware, software, and staffing solutions currently in place, along with a strategy of migration with minimal impact on the operating business.

## TCO Analysis

A direct comparison analysis of on-premises versus AWS Cloud is not easy when considering migration. Taking advantage of Datavail's extensive TCO Analysis weighs all on-prem versus cloud management in managed and tiered approach, delivering incremental improvements throughout the program.

## Migration Roadmap & Strategy

For migrations to the cloud, our assessments always include a strategy pursuing the migration with minimal impact on the operating business.

## Future State Architecture

Let Datavail provide the technical resources required to design, build, and integrate applications that effectively meet the needs of end users, management, and IT.

## Rapid POC

Datavail delivers a POC quickly to support each client's needs. Agility ensures our ability to adjust proactively based on client needs.

## Contact Us Today For More Information

Datavail is a company of over 1,000 professionals helping clients build and manage applications and data via a world-class tech-enabled delivery platform and software solutions across all leading technologies.
