

Customers of Oracle Business Intelligence (OBIEE) now have the ability to develop and deploy reports, dashboards, metrics, and data warehousing tasks more rapidly with BIMUDFlow®, Datavail's Agile DevOps BI and Continuous Integration solution for OBIEE and Hyperion.

What is BIMUDFlow?

BIMUDFlow is the OBIEE Multi-User Development solution for continuous integration and source control management, which increases the frequency of deployment cycles and optimizes the OBIEE development team's SDLC efficiency. It's DevOps for OBIEE.

OBIEE + BIMUDFlow = Rapid Deployment LifeCycle Management

Why BIMUDFlow?

Although most BI teams have coordinated task assignments amongst their Oracle BI development teams, many still lack a centralized means for capturing issue fixes and enhancement requests. Recording this information on spreadsheets or in word processing documents is not efficient as there are no automated hooks which allow for updating, notifying or otherwise collaborating on the request.

How Does BIMUDFlow Enable Agile BI?

By providing a request management system in combination with an agile methodology board and request tracking collaboration interface, developers using BIMUDFlow now have control and complete visibility into tasks in progress, completed, or otherwise outstanding. These tasks can then be associated with each development effort. This allows developers to coordinate availability to work on upcoming requests as an individual or as a team. Lastly, it allows for stronger linkage to source control management and continuous integration byproducts such as:

- ✓ Rolling back development efforts
- ✓ Patching environments by task
- ✓ Keeping other developers' work environments in sync after the merging of the team's RPD or Web Catalog has taken place

In addition to the above features, BIMUDFlow also offers:

- ✓ Instant monitoring of client tool changes for Developers
- ✓ GUI Source Control Management options and manual controls
- ✓ Agile Boards
- ✓ Merge/Patch organization
- ✓ GIT server interoperability
- ✓ Snapshots of RPD and Web Catalog
- ✓ Client/server configuration
- ✓ Issue tracking

OBIEE Development

On-Premise OBIEE lets users see how to deploy frequently.

Continuous Integration

Deploy weekly, not monthly, and power the release process.

Deployment Recipe

SCM, CI, OBIEE. Begin using the right mix of technology, correctly.

Demonstrations, Trials, and Use Cases

BIMUDFlow is available to download with full Enterprise functionality on a 30-Day Trial Period so that it can be deployed and tested in your Oracle BI environment with your Developers. If interested, in an end-to-end demonstration of the solution, please contact us at info@datavail.com.
