Collaborative BI

Commenting inside of the Oracle Business Intelligence (BI) system of dashboards and self-service analytics is available through Datavail's BITeamwork™, a simple plug-in designed specifically for the collaboration needs of business users and administrators.
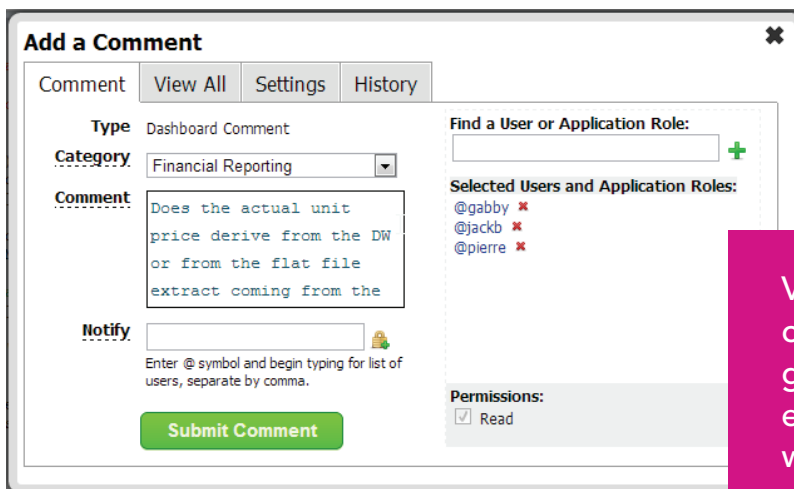

Without writing a single-line of code, users can leave comments on dashboards or self-service analysis reports in a very seamless and intuitive manner.

How it Works

Comments can be specific to one dashboard, an individual dashboard page, a graph, or most importantly, an individual cell on a table or pivot table.

Users have several options when creating comments including:

▶ Exporting for end of month and board book (MBR, QBR) style reporting

▶ Securing a comment to only specific users or application roles

▶ Creating multiple comment columns for several data variance justifications

▶ Using the prompt values to provide the context of comments for comment aggregation

▶ Notifying users via Oracle BI Delivers to review a comment

Via the intuitive user interface and comment indication system, BITeamwork gives users invaluable functionality to extend their existing analytics culture within the organization.

Drive a Better Analytics Culture

- Create a read/write feedback loop with end-users
- Provide accountability and leadership in the OBIEE portal
- Extend with embedded commentary in intranet portals
- Provide a directive to spend more time contributing to analytics and decision making

Expand User Adoption

With the ability to leave permanent comments, users are more likely to:

- Interact independently with the data and share perspectives
- Spend more time in the BI environment
- Make references back to the analytics portal and to other employees
- Take ownership of their respective portion of the system

Users feel empowered when the communication flows two ways: information out and feedback in. Ultimately, users give credibility to the information and respect to those by whom the input is provided.

Demonstrations, Trials, and Business Cases

See how easy it is to create and administer comments in Oracle BI. BITeamwork is available to download with Enterprise functionality on a 30-Day Trial Period so that it can be deployed and tested in your Oracle BI environment.

For an end-to-end demonstration of the solution, contact us at biteamwork@datavail.com or 877.634.9222, or go to www.biteamwork.com for more information.
