

Cloud-Based Speed Test Program

Datavail Speed Test Program

The Datavail Speed Test program is designed to assess and prove how quickly your organization can build, migrate, optimize or modernize workloads onto AWS.

The program is designed to optimize around the workloads that provide the greatest return for your organization. Whether it is a database migration or application modernization, Datavail will help you determine, assess, and demonstrate through a proof of concept your speed to the AWS cloud.

Features & Benefits

Multiple Workload Options

The speed test is not limited to a specific type of workload. The focus of the engagement can be one of the many database options supported in AWS, whether it is a relational or non-relational database.

If perhaps you are looking to develop or refine your analytics approach, modernize an application or architect a target AWS infrastructure configuration.
- Datavail has you covered.

How it Works

Whiteboard

We start with a whiteboard session to help determine area of focus or questions that will be answered in the proof-of-concept.

Discovery

We then dive into the focus area to uncover the relevant factors that will drive a successful outcome in your environment.

Initial Migration

Finally, our cloud experts work with you to configure an initial workload in AWS that is optimized for cost, timing and purpose. All that's left to do is execute at speed!

How to Get Started

As an Advanced Consulting Partner with AWS, Datavail has developed this lightweight approach to business optimization to minimize cost and efforts, while maximizing value. We are confident in our ability to deliver value to your business and will provide a Whiteboard session of up to two hours at no charge or will apply two hours to your initial SOW. You may also qualify for further funding assistance that could deliver the Speed Test Program for less than \$10k.
