

# Using Technology Centered Around People

## Digital Workplace

A digital workplace is more than the products that you use for your employees to complete their day-to-day tasks. It's an overarching concept that transforms the way you work. It eliminates the barriers that stand in the way of accessing information and communication throughout your organization. You gain a collaborative and integrated environment that fosters engagement, productivity, growth and efficiency.

We help you achieve your digital workplace vision through our extensive experience in digital transformation for employee engagement. Whether you need help with your existing SharePoint-based intranet or want to capitalize on your Office 365 investments, our experts are ready.

## Evolve into an Integrated Digital Workplace

### Advisory Services

Uncover the most beneficial ways to implement a digital workplace that meets short and long-term goals. Leverage your existing investment in Office 365 to support a better way of doing business.

### Migration Services

Migrate to Office 365 from your on-premise applications with least disruption to your business operations with increased user adoption.

### Building a New Digital Workplace

Incrementally deliver on your organization's collaboration and engagement objectives with our digital workplace roadmap.

### Enterprise Content Management

Implement a holistic process to manage the entire lifecycle for your documents – from creation to archive to disposal.

### Increased Collaboration & Engagement

Enables employees to collaborate as teams and groups irrespective of physical location on ideas, documents, work schedules etc.

# Technology Capabilities

The digital workplace combines the right pieces of technology to align people and processes.

You can think of it like a game of Tetris. You can choose the Office 365 apps that go perfectly to advance your organization's productivity and efficiency.

- Office 365
- Exchange
- Skype for Business (On-Premise and Online)
- SharePoint (On-Premise and Online)
- Collaboration (Teams, Groups, Planner, Delve)
- Microsoft Dynamics CRM (On-Premise or Dynamics 365)
- PowerBI
- Azure
- Custom .NET

Many organizations are making plans to implement a digital workplace. CIOs are evaluating technology and building roadmaps. When you consider creating a digital workplace, besides the technology, planning how you will manage the change is critical. Your workforce is going to undergo a great deal of change in a relatively short time. The digital workplace will change how people do their jobs, and in some cases, it will change the jobs they're doing.

Planning and implementing digital workplace technology isn't always easy. Your challenge could be establishing a vision of how that technology can benefit your organization, or building that roadmap to reach your goal.
