

Datavail's Data Quality Solution and Services for Insurance

Datavail's Data Quality Solution is designed to ensure the integrity, accuracy, and consistency of your insurance data. By ensuring high-quality data through our comprehensive solutions, we lay the groundwork for successful reporting and AI initiatives, empowering algorithms with accurate, clean data to drive insightful decisions and enhance predictive capabilities.

Monitoring: Real-time dashboards to track data quality across Guidewire and other systems, showing record counts and facilitating the observation of quality improvements over time.

Cleansing and Standardization: Addressing ELT/ETL problems by handling missing values, invalid data, and ensuring data uniformity.

Transformation Monitoring: Vigilant oversight of data transformations and rules to detect and correct issues promptly.

Measurable Value Realized by our Customers

Over 99% data accuracy for the business teams such as finance.

Transformation Tracking
We effectively managed 13 data transformations in transit, ensuring data integrity throughout the process.

Frequent Updates
With our pipeline running updates four times a day, we've identified and swiftly resolved 2-3 issues per session, including data delivery failures and format inconsistencies.

Delta Load Speeds & Sizes
Enhanced data quality by reducing the time to load updates for an average of 700 tables from 3 hours to just 35 minutes, ensuring fresher, more accurate data.

Full Load Speeds & Sizes
Our solutions achieved a 67% decrease in load time for 23 Terabytes, slashing the full load duration from 56 days to 19 days, significantly improving data quality and timeliness between policy and claim centers.

Our Offering

Data Quality Accelerator

A pre-configured tool that speeds up the implementation of data quality processes, tailored for insurance data challenges.

Experienced Team

Our specialists bring a wealth of experience, having navigated data quality issues across various insurance environments, ensuring tailored solutions that align with your business needs.

Benefits

- Enhance decision-making with high-quality, reliable data.
- Reduce operational risks associated with data errors.
- Improve compliance with regulatory requirements.
- Accelerate time-to-market with efficient data workflows.

Datavail's IT Services and Solutions for Insurance Companies

Modern consumers demand personalized insurance, seamless digital interactions, and instant services, pushing insurers to evolve. With rising data privacy laws, insurers must also enhance data security and compliance. Datavail, as an IT services partner, helps manage this data efficiently, tailoring solutions to each insurer's specific needs.

Stay Ahead with Datavail's Assistance

Guidewire Data Integration

Datavail has partnered with Guidewire and Microsoft to deliver the Guidewire Cloud Data Access (CDA) Connector for Azure.

Business Intelligence

Datavail can help insurance clients build and maintain business intelligence platforms. These platforms can provide real-time dashboards and reports that enable insurers to monitor key performance indicators, track policyholder behavior, and gain actionable insights.

Advanced Analytics

Insurance companies rely heavily on data analytics to make informed decisions. Datavail helps analyze large volumes of data through AI and ML to help insurers gain insight from customer data, claims data, and financial data to improve risk assessment, pricing strategies, and fraud detection.

Support and Maintenance

Datavail provides ongoing support and maintenance services to ensure that databases and analytics systems are running smoothly and up to date.

Data Management & Governance

Datavail can assist insurance companies in managing their vast amounts of data efficiently. This includes data storage, data migration, data cleansing, data standards, data integrity and data integration services.

Cloud Enablement

Datavail helps insurance companies transition their databases and IT infrastructure to cloud platforms for scalability and cost-efficiency.

Predictive Modeling

We assist insurance clients in developing predictive models for underwriting, claims processing, and customer retention, ultimately improving operational efficiency and profitability.

Database Optimization

Efficient database management is crucial for insurance companies to ensure smooth operations and minimize downtime. Datavail can assist in database optimization, performance tuning, and troubleshooting.
