

Oracle Hyperion Inactivity Report

datAvail
BI/Analytics • Applications • Databases

Datavail's Accelatis* platform, developed by former senior-level Hyperion developers, is the only application performance management (APM) solution designed specifically to work directly with Oracle Hyperion products.

Automation Module - Inactivity Report

The Automation module can generate reports across 90, 180, or even 365 days to identify:

- User activity frequency
- Objects accessed
- Latent objects and frequency of object usage

The list of items that can be monitored via inactivity reports include:

User logins

Grids

Forms

Business rules

Reports

Books

Datavail customers are enthusiastic about how receiving these reports can make their IT environments less wasteful and more efficient.

We're very happy with the 90-day reports. I just removed 17 Hyperion Financial Management users last week, as we were down to five available licenses," said a financial systems manager at a global agricultural company. "The reports are working well for us and keep us in compliance with Sarbanes-Oxley, IT audits, and Oracle licensing."

Inactivity Report: Features

Accurate tracking of accounts not being used

Direct insights into which EPM objects employees are really using

Automatic data capture, analysis and report generation at regular intervals

Inactivity Report: Benefits

Oracle software licenses can be pricey, stretching well into the five figures. To make the most of their IT spending, organizations must ensure that the licenses they purchase are truly necessary for their operations.

The benefits of our inactivity reports include:

- Cost savings by identifying & reallocating unused Oracle licenses
- Increased productivity - manual efforts to achieve the same understanding can take up to a week.
- Ability to see in detail, forms and objects that aren't being used by the EPM community
- Faster upgrade/migration by eliminating objects that are never used
- Employees can devote more effort to important activities, rather than manually inspecting licenses for inactivity

Datavail is an Oracle Platinum Partner, serving hundreds of customers, from small businesses to Fortune 500 firms. Datavail's APM solution by Accelatis helps you get the best performance out of your Hyperion deployment.

Other benefits of our full APM platform include:

- Simple automation of common, repetitive tasks
- Pre-built scripts for performance testing
- Easier root cause analysis after crashes and performance issues
- Proactive monitoring to ensure availability and end user productivity during peak usage periods
- Holistic views of Hyperion properties and activities within a single console

*Accelatis was acquired by Datavail in July 2017
