SQL Server Migrations to Microsoft Azure

Datavail's expert database administrators can methodically plan and execute SQL Server migrations to Microsoft Azure, so your organization can take advantage of the effortless scalability and cost-savings of the cloud. We leverage automation and our technology to make SQL Server planning and implementation as streamlined and headache-free as possible.

Cost Savings

Our DBAs stick around long after your migration is completed to help you get the most out of your new database environment. We provide performance improvements to help you increase database availability, reliability, and recoverability.

Get End-to-End SQL Server Migration Assistance

Your SQL Server database migration project doesn't have to be a point of frustration in your organization. We can handle all or part of your migration, delivery, planning, execution, and support services in the following areas:

Database Discovery

The first step in a successful SQL Server to Microsoft Azure migration is understanding your current environment. We discover SQL Server instances and your environment specifics. From there, we run Upgrade Advisor to find and fix issues in your databases so they can't cause problems during the migration. We also explore Application Database dependencies and go through the Microsoft Assessment and Planning toolkit.

Migration Planning & Targeting

We use the information from the discovery process to plan and target your migration strategy. We assess the discovered workload requirements and any dependencies, estimate the migration downtime and how it may disrupt your daily operations, define the database security requirements, estimate the total cost of ownership, and go through the Microsoft Data Migration Assistant.

Database Migration & Optimization

A database migration is a complex operation, especially when you're working with mission-critical databases. Our expert DBAs help you select an appropriate migration window and planned downtime period, fix issues highlighted by the Data Migration Assistant, test your databases for problems, create new disaster recovery and maintenance plans, restructure your workloads, choose the right-sized capacity for your business requirements, and walk you through the new features. If you need ongoing support for your newly migrated database, we're available 24x7x365.

Why Work with Datavail?

Datavail has been delivering database services and support for over 17 years and is a Microsoft Gold Partner. We have more than 200 SQL Server DBAs worldwide, and they've taken our customers through 100+ successful migrations. With over 500 customers, 200,000 databases managed, we have the real-world experience needed to make your database migration project a success.
