Multi-level SharePoint Expertise Available As A Managed Service

SharePoint is not a one-size-fits-all solution. Instead it is a solution that can, and should, be tailored to meet business needs. This inherently poses a challenge when trying to find SharePoint talent, because you either run into talent that is highly specialized or very broad. The highly specialized usually fall into specific SharePoint roles. The broad knowledge types are usually your system administrators who have been forced to take on SharePoint as an additional duty.

The most common roles are the Architect, the Administrator, the Developer, and the Designer. Here at Datavail, our SharePoint staff has expertise in all of these roles. This allows us to provide you with high quality SharePoint services, tailored to your needs.

After all, Database Administration is all we do. Need the right solution quickly? Let us help.

Extended SharePoint Coverage Solutions

Within our core practice, a U.S-based Primary SharePoint Administrator is appointed to each client to facilitate real time communication and project management. This expert is supported with global delivery Sharepoint experts to provide extended coverage as needed. The combination of a proven delivery model and top-notch experience makes Datavail the right choice for your SharePoint administration.

Methodology & Deliverables

Every project is customized to its own specific scope, outcomes and environment. To achieve the best results, Datavail follows standard methodology: Discovery and Data Gathering.

Project Plan Actions Steps and Timeline	Implementation
Training & Support	Evaluation & Testing
