

SharePoint Migration Services

You know that there are risks involved in a SharePoint migration. But, when you work with Datavail, you'll get the benefit of our in-depth experience that helps us avoid those risks.

Our team can manage your migration whether you're running SharePoint on-premise, online, or in a hybrid deployment. In addition, we use a well-defined migration plan that will help you to improve your SharePoint implementation and ensure business continuity.

Migration Services Tailored to Your Deployment

No two SharePoint deployments are the same. We have the expertise to tailor your migration, regardless of your deployment.

Migrate to a Newer SharePoint Version

If you have an on-premise SharePoint deployment, we can help you migrate to the latest SharePoint version. At the same time, we can help you expand your development capacity, increase the number of features you use, and develop SharePoint solutions to solve your users' needs.

Migrate to SharePoint Online or Office 365

We can help you move your SharePoint installation to the cloud, while preserving your on-premise capabilities.

Migrate to or from a Hybrid Environment

We can help you migrate to a hybrid environment or migrate from a hybrid solution to the cloud.

Migrate from Third-Party Software to SharePoint

If you want to migrate from a third-party solution to SharePoint on-premise or SharePoint Online, we'll make sure your organization makes that transition seamlessly.

A Proven Migration Plan

We're experienced SharePoint consultants. We understand that migrating to a new type of SharePoint environment offers the opportunity to do much more than just transfer capabilities and data. Done well, migrating also gives you the chance to refine your SharePoint installation to meet even more of your users' needs. Our proven migration plan helps us determine if there are opportunities for improvement.

Assess

We review your existing SharePoint environment and develop a model for your migration.

Analyze

We analyze your existing SharePoint installation to determine how it is structured, how you've defined user permissions, how you've customized it, and more.

Inspect

We'll inspect the content in all of the solutions to identify critical content that should be top priority during the migration. We'll also identify content that no one is using, or is obsolete.

Define

We'll define a detailed migration plan with a precise definition of migration tasks.

Migrate

As needed during this step in the migration plan, we will also reorganize, redesign, restructure, and more to make your installation as useful as possible.

Test

We will test the new environment to ensure that all features are running properly, and to identify performance or security issues.

Consult

We'll work with your SharePoint administrators to define management requirements related to the new deployment, and to conduct training sessions for end-users.

Support

We'll provide post-migration support to assist you in fixing technical issues, and overcome user adoption pitfalls.

Migrate SharePoint Without Business Interruption

It is Datavail's mission to focus on making sure your business operations continue uninterrupted during a migration. We want to minimize risks and build a better working environment. During the migration, we accomplish that mission by:

- Creating a migration plan that doesn't interrupt working processes.
- Guaranteeing stable operations for everyone who depends on SharePoint.
- Moving important content as quickly as possible without disrupting your business.
- Safeguarding your content and maintaining SharePoint functionality throughout the migration.
- Establishing new features that will help employees manage day-to-day activities more effectively.
- Optimizing SharePoint's architecture to minimize the impact on your IT staff, and reduce costs for maintenance and support.
- Promoting SharePoint's benefits and actively supporting SharePoint adoption.

Why Choose Datavail?

We've been working with SharePoint since 2007, and have more than 300 SharePoint implementations under our belt. Our extraordinary team of over 200 Microsoft Certified Professionals offers experience, expertise, and a desire to serve.

As a Microsoft Gold Partner, we use our insider status and exceptional experience to offer you only the best in a migration partner.
