

Speed Up Your Application Development Process

Discover why managed application services might be your answer.

How Can Datavail Help You Meet Your Application Needs?

Organizations often encounter major growth challenges as they seek to integrate evolving IT systems, software, and applications.

Datavail's team of experts provide the technical resources required to design, build, and integrate applications that effectively meet the needs of end users, management, and IT staff; all for a predictable cost.

We Specialize in:

- Agile Development
- Application Integration
- Architecture & Roadmaps
- Backlog Management
- Digital Workplace
- Monitoring & Patching
- Sprint Teams as a Service
- DevOps
- QA & UAT
- Reporting

Benefits of Application Development Managed Services

- 1 Predictable costs
- 2 Flexible delivery options
- 3 24x7x365 coverage
- 4 Improved employee retention
- 5 Better work/life balance for your team
- 6 Use your teams talents more effectively
- 7 Increase productivity
- 8 Maximize your application performance
- 9 Supplement your team as needs arise
- 10 End-to-end application support

Why Choose Managed Services Over Hiring a Full-Time Employee?

Hiring full-time employees is expensive and time-consuming, and it doesn't always pay off.

With application managed services, you get the exact team you need to build and maintain your applications, supplement skill gaps, and improve capacity planning so you can respond to changing demands.

More Skills, More Value

With managed application services, you have access to extremely experienced talent, even if you don't need it on a full-time basis. Besides that, you'll have access to professionals with different skill sets who can perform the more mundane maintenance tasks that your high-level professionals dislike.

Work With a Partner You Can Trust

Datavail has been a Microsoft Partner for over 17 years. As a Gold Partner, our consultants, architects, DBAs and development team have experience with the entire Microsoft stack, ranging from SharePoint, Dynamics 365 (CRM), .NET, SQL Server database solutions, to Office 365 and Azure cloud services.
