# Talend Consulting Services

When data is collected from multiple sources, it needs to be readily accessible, reliable and relevant at a rapid pace to allow organizations to make critical business decisions. The only way that organizations can meet their goals is to take action based on high-quality, trusted data – healthy data.

Talend Data Fabric has been selected by organizations around the world for its robust functionality, ease-of-use and cost effectiveness. Datavail Data Management & Analytics Consulting Services has the experience and expertise to provide assessments, roadmapping, implementation and managed services to help organizations on their journey to healthy data.

## Talend Consulting Services from Datavail

As a Talend Gold Partner, Datavail can apply our extensive expertise, experience and knowledge to helping with a wide variety of services including:

### Assessment

Performing an assessment of your data management and analytics environment and providing you with a total cost of ownership (TCO) evaluation.

### Roadmap

Creating a complete data management strategic roadmap.

### Implementation

Application implementation and integration, including architecture, design and deployment.

### Data Analytics

Setting up data warehouses and data lakes, as well as reporting and dashboards.

### Cloud Migration

Datavail has assisted hundreds of companies to migrate and modernize their data applications and platforms successfully and safely, with little interruption.

### Data Management & Governance

Developing a data health program and working closely with an organization's data analysts and data stewards in reviewing policies, procedures, data quality standards, naming conventions, data security levels, and resolving data conflicts across business domains.
# What is Talend Data Fabric?

Talend Data Fabric is a unified platform of software delivering healthy data at every stage of the data lifecycle. Beginning with data integration, to data integrity and governance, and data sharing, Talend is built for cloud, multi-cloud and hybrid environments.

Talend helps organizations obtain and maintain complete, clean and uncompromised data that's needed to stay in control and mitigate risk. With Talend, organizations can make every decision with confidence.

# Talend Features

## Data Integration

Data which organizations depend on to make timely decisions comes from a myriad of sources – internal and external, on-premises and cloud. Talend Data Integration provides over 1,000 connectors and components to allow companies to develop and deploy data pipelines more quickly with its drag-and-drop interface. It also supports large data sets for advanced data analytics, and supports analytics solutions from leading cloud providers and platforms, including Microsoft Azure, Amazon Web Services (AWS), Snowflake and Google Cloud Platform (GCP).
## Data Quality

As part of the Talend Data Fabric platform, Talend Data Quality cleans data in real time, and uses machine learning (ML) to provide recommendations as data flows through an organization's systems and applications to address data quality issues. It also has the capability to enrich data as well with such external sources as business identification to postal validation codes, which frees up time for data professionals to perform more analysis as opposed to administration.

## Data Integrity and Governance

Talend Data Fabric provides point-and-click, browser-based tools to share and capture legacy knowledge from business users, so that data is clean, compliant and accessible.

## Application and API Integration

Talend Data Fabric allows organizations to share services and trusted data across internal departments and external groups with user-friendly APIs. It also allows organizations to streamline their DevOps and lower operational costs through the use of APIs and microservices, which teams are able to reuse.

# Why Datavail?

Datavail's Data Management and Analytics practice consists of hundreds of experts who provide a variety of data services including initial consulting and development, designing and building complete data systems, as well as ongoing support and management of database, data warehouse, data lake and data integration, and virtualization and reporting environments.

We have assisted hundreds of organizations with their data environments for more than 10 years. Moreover, the services we provide to each client adapts to their unique needs over time.

Our Data Analytics consulting services allow companies to integrate their data from disparate internal and external sources and allow it to be transformed so that it is accessible, reliable, insightful, actionable, and used to make better decisions.

The data analytics services Datavail provides can allow companies to use their data to improve operational efficiency, find competitive advantages, enhance financial effectiveness to increase revenues, decrease costs, and more.

# Benefits of Talend

### Innovation
Enhanced innovation and speed-to-market based on better data quality and increased actionable insights.

### Productivity and Cost Savings
Improved productivity and efficiency leading to cost savings.

### Reduce Risk
Greater data security, regulatory compliance and risk reduction.

### Revenue
Increased customer retention and organizational revenue.

### Ease of Use
Compared with other robust data management platforms, Talend is user friendly and easy-to-manage.
