Stop Wasting Resources

Though the Oracle Data Relationship Management (DRM) application can integrate with PeopleSoft Financials, the two applications have a problem: Changes to DRM are not automatically updated in PeopleSoft. As a result, companies using these two applications are dealing with the frustrations of constant manual data updates in PeopleSoft.

If you have both of these platforms, you're likely losing a significant amount of:

◆ Time   ◆ Money   ◆ Data accuracy   ◆ Troubleshooting capability

The Cost: Manual is Expensive

Datavail's experience has proven that companies that manually update changes from DRM to PeopleSoft Financials are:

- ◆ Losing up to two hours of work value per day
- ◆ Hiring up to four outside analysts to manage quarterly reporting
- ◆ Multiplying these numbers when reorganization projects come up – hundreds of lost hours across several months
- ◆ Wasting time on technical problems rather than focusing on strategic projects

The Cost? Weeks of valuable employee time, thousands of dollars of outside help, and a lack of focus in areas that can move the business forward.
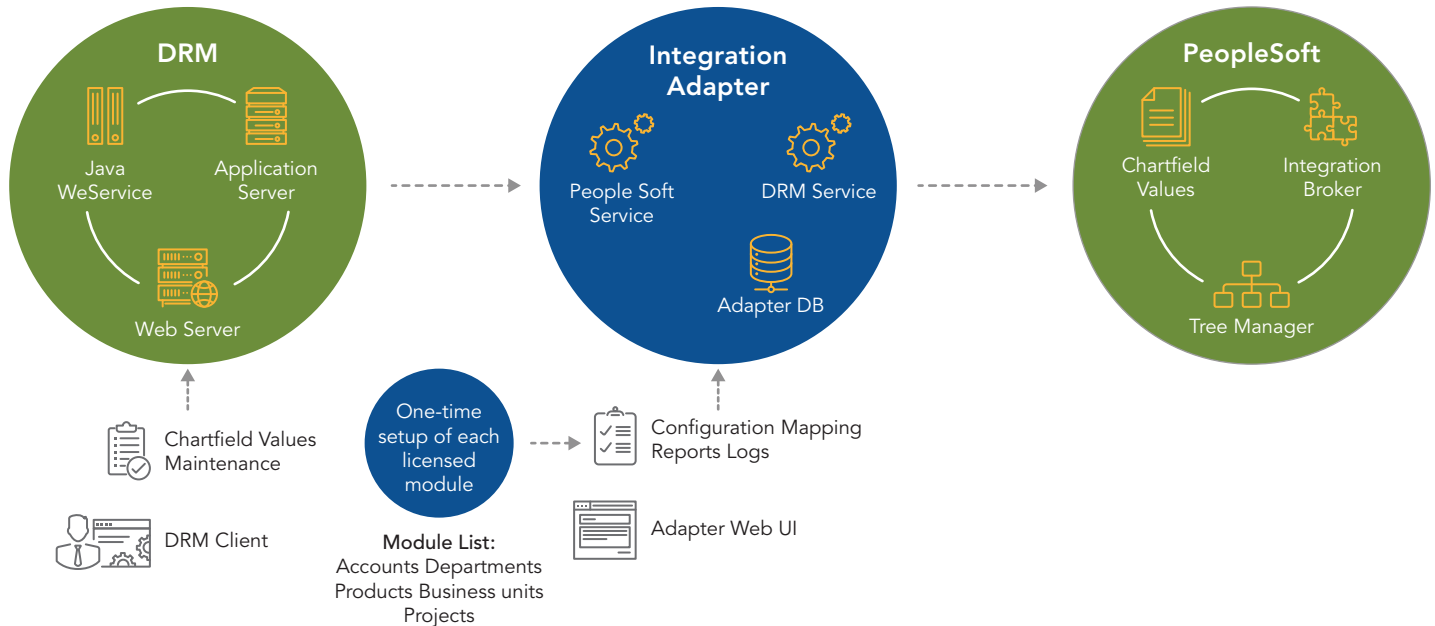

The Fix: Our DRM PeopleSoft Adapter

Datavail's DRM PeopleSoft Adapter provides benefit immediately by eliminating the back-office maintenance time and costly personnel listed above. Companies that implement our DRM PeopleSoft Adapter can:

- ◆ Eliminate manual processes – changes in DRM are automatically pushed to PeopleSoft Financials
- ◆ Free up Hyperion resources – hours per day and weeks per quarter
- ◆ Redirect Hyperion talent to more important strategic work
- ◆ Record an audit trail and track versioning
- ◆ Significantly reduce the risk of human error
- ◆ Configure and maintain integration from the web interface

DRM PeopleSoft Adapter Architecture

Skip the Custom Build

It can take up to a year or more to custom-build this kind of inter-application integration at a cost of $200k to $1MM. Why spend the money and hours when we've already done the work for you? We've got the bases covered:

- ◆ Application templates for loading the properties, exports, validations, and queries
- ◆ Web-based UI to maintain DRM and PeopleSoft configuration
- ◆ Visibility of the changes published to PeopleSoft through DRM reports
- ◆ Publishing of changes at required intervals using the adapter scheduler

Get Started Today

Leverage Datavail's extensive experience with DRM and PeopleSoft across diverse industries and geographies. As an Oracle Platinum Partner with 17 specializations, our EPM know-how and tight integration across consulting, development, support, and education puts our entire team behind your success. Contact us today to start solving your DRM and PeopleSoft integration challenges.
