Datavail Company Overview

We are database, analytics and application data integration specialists.

1

16+ years delivering data services

2

700+ customers, average client retention of 7 years

3

Managed services, projects, and staffing

Database Operations

- ✓ All major platforms: MS SQL, Oracle, DB2, MySQL, MongoDB, Postgres
- ✓ Comprehensive development & operational services
- ✓ 24x7 in-office delivery
- ✓ US & Global models
- ✓ Reactive & proactive services

Analytics, Visualization & Integration

- ✓ Microsoft SSRS, SSIS, SSAS
- ✓ PowerBI
- ✓ Oracle OBIEE, BICS, Golden Gate
- ✓ Informatica
- ✓ Oracle Data Integrator
- ✓ ETL development & operational run

Application Development, Integration & Maintenance

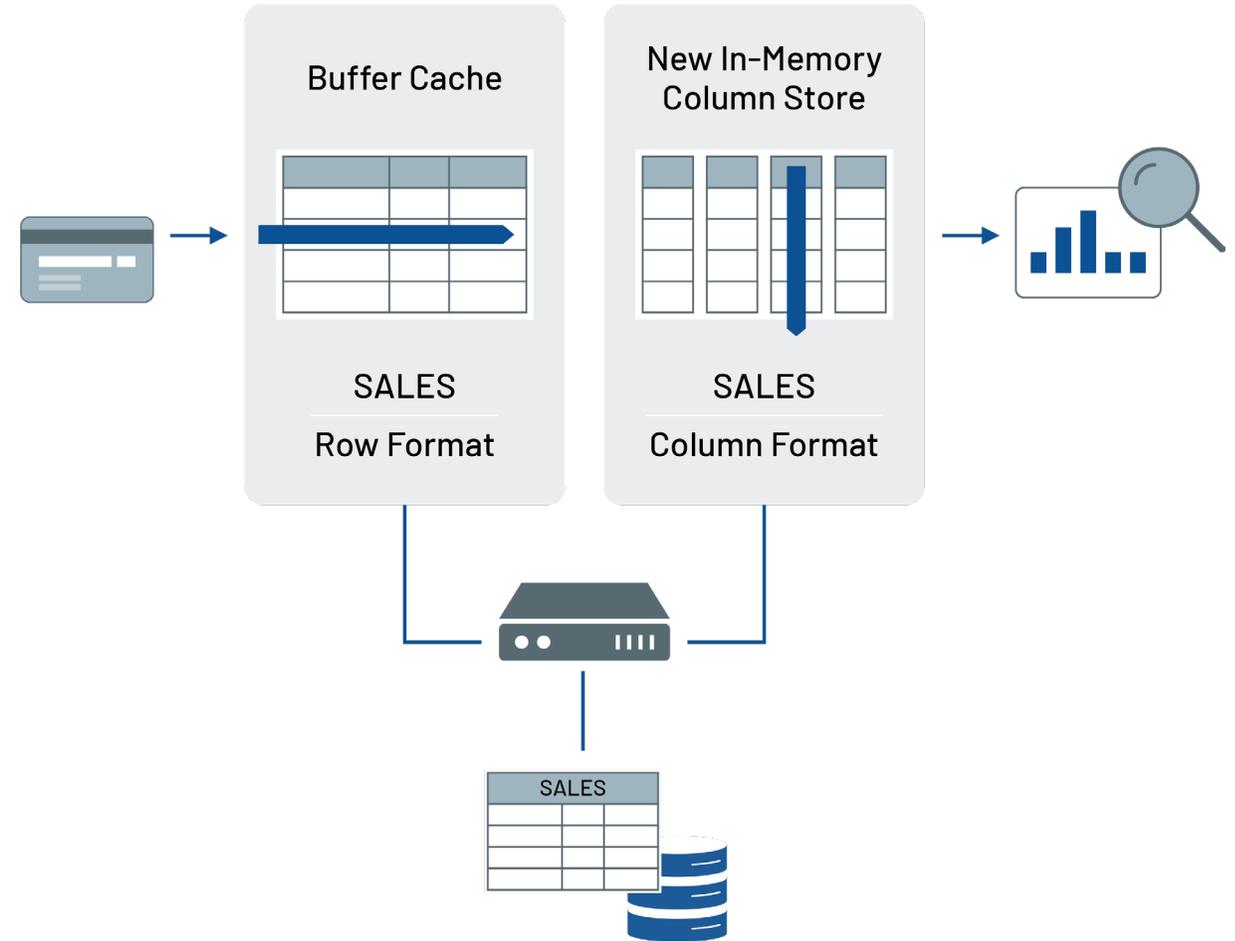

- ✓ Oracle EBS
- ✓ Hyperion
- ✓ Microsoft Dynamics CRM
- ✓ SharePoint
- ✓ Custom development (Microsoft .NET)

Agenda

- ✓ What is Oracle In-Memory?
- ✓ Release History & Licensing
- ✓ Configuration, Loading Tables In-Memory
- ✓ In-Memory Advisor
- ✓ Example Queries and Explain Plans
- ✓ Final Thoughts

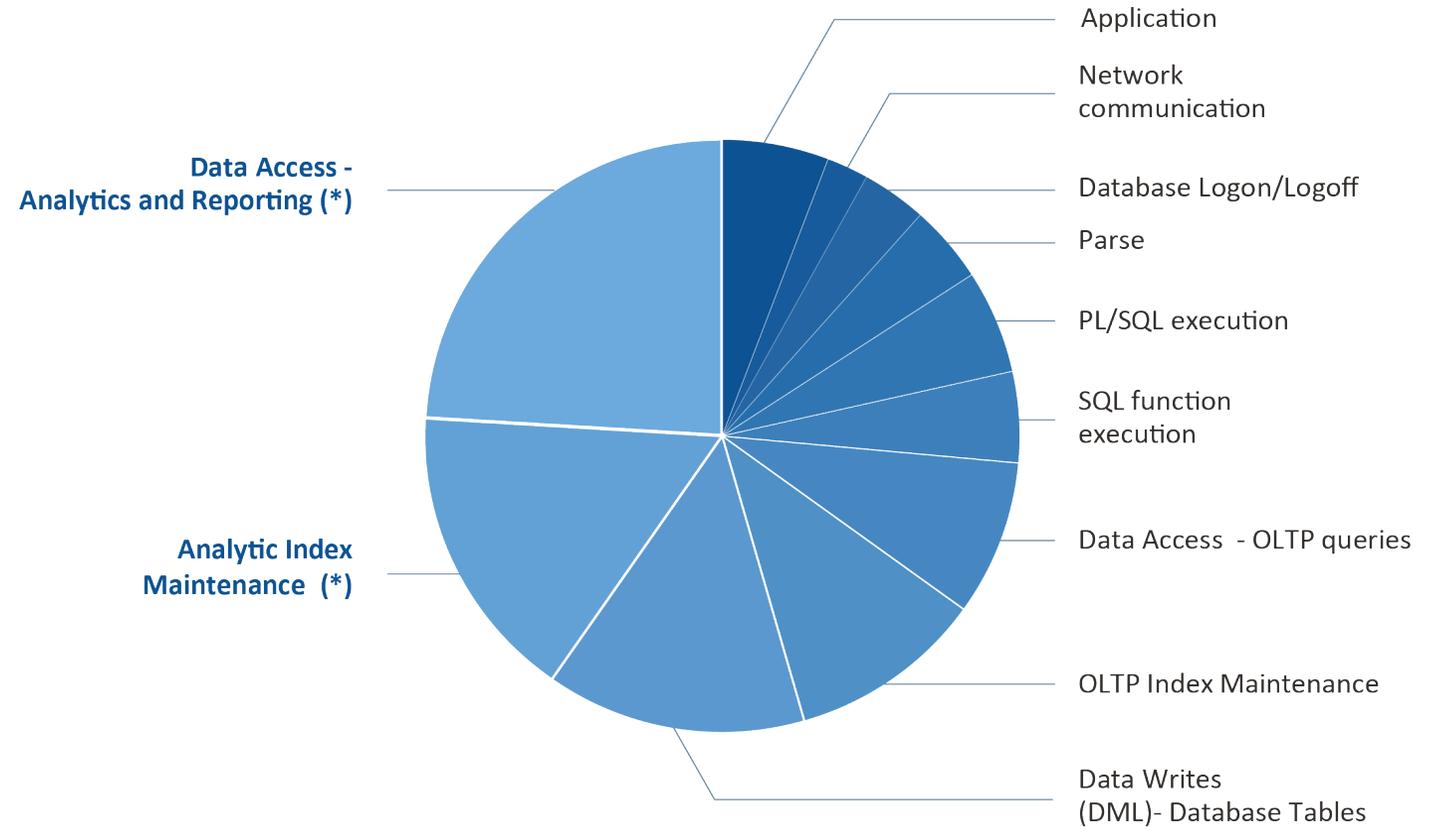

What is Oracle In-Memory?

- ✓ Uses part of your SGA memory for a compressed column store
- ✓ Primarily for Analytical Queries
- ✓ Simple to use, no application changes required
- ✓ Oracle Optimizer will choose the best path for your SQL query

What Query Type Benefits Best?

- ✔ Analytics and Reporting
- ✔ Analytic Index Maintenance

<https://www.oracle.com/technetwork/database/in-memory/overview/twp-dbim-usage-2441076.html>

In-Memory Options by Release

12.1

- ✓ Columnar format in memory
- ✓ Vector SIMD instructions, compression, In-Memory Storage Indexing

18c

- ✓ Automatic In-Memory

12.2

- ✓ In Memory for Active Data Guard
- ✓ Heat Maps, controlled by configurable policies
- ✓ Bloom Filters, Join groups
- ✓ IME – In Memory Expressions
- ✓ Exadata Flash

19c

- ✓ External Tables
- ✓ Resource Manager enabled for Databases In-Memory

Licensing Requirements

Please confirm with your Oracle Sales Representative

Documented Here

<https://docs.oracle.com/en/database/oracle/oracle-database/12.2/dblic/Licensing-Information.html>

- ✓ Additional cost for on-prem EE or EE-EX
- ✓ Not Available for SE2
- ✓ Included OCI DBCS EE-EP/ExaCS
- ✓ Trial setup allowed

Initialization Parameter	Description
<u>DBA_FEATURE_USAGE_STATISTICS</u>	Displays information about database feature usage statistics. When the IM column store is accessed, the NAME column shows In-Memory Column Store.
<u>DBA_SEGMENTS</u>	Describes the storage allocated for all segments in the database. Several columns, including INMEMORY and INMEMORY_PRIORITY, describe In-Memory attributes of the segment.
<u>DBA_TABLES</u>	Indicates which tables have the INMEMORY attribute set (the INMEMORY column is ENABLED) or not set (DISABLED).
<u>V\$ACTIVE_SESSION_HISTORY</u>	Displays sampled session activity. Several columns, including INMEMORY_QUERY and INMEMORY_POPULATE, describe session activity relating to the In-Memory Column Store at the time of sampling.
<u>V\$IM_SEGMENTS</u>	Presents information about all In-Memory segments in the database. Only segments that have an In-Memory representation are displayed. If a segment is marked for the IM column store but is not populated, the view does not contain a corresponding row for this segment.
<u>V\$INMEMORY_AREA</u>	Displays information about the space allocation inside the In-Memory Area.
<u>V\$SGA</u>	Displays the size of the In-Memory Area.

In-Memory Configuration

- ✓ Simply set `inmemory_size`
- ✓ Check system memory
- ✓ Adjust `SGA_TARGET` or `MEMORY_TARGET` as needed

```
SQL> alter system set sga_target=4g scope=spfile;

System altered.

SQL> alter system set inmemory_size=2g scope=spfile;

System altered.
```

```
SQL> shutdown immediate;
Database closed.
Database dismounted.
ORACLE instance shut down.
SQL> startup
ORACLE instance started.

Total System Global Area 4294963264 bytes
Fixed Size                 8904768 bytes
Variable Size             486539264 bytes
Database Buffers         1644167168 bytes
Redo Buffers              7868416 bytes
In-Memory Area           2147483648 bytes
Database mounted.
Database opened.
SQL> select name,value from v$sga where NAME='In-Memory Area';
```

NAME	VALUE
In-Memory Area	2147483648

OEM In-Memory View

Memory Advisors

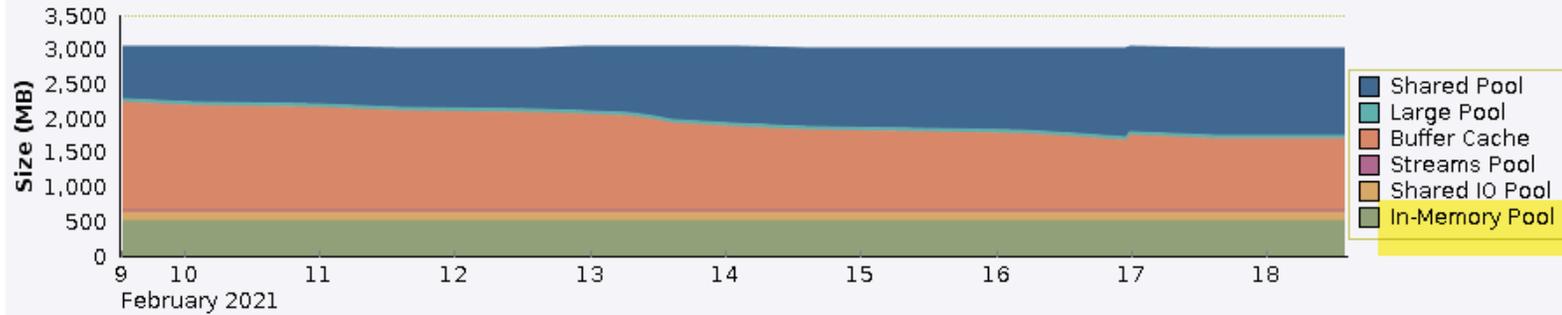

SGA

PGA

The System Global Area (SGA) is a group of shared memory structures that contains data and control information for one Oracle database. The SGA is allocated in memory when an Oracle da

Allocation History

This chart shows the history of the components of the SGA.

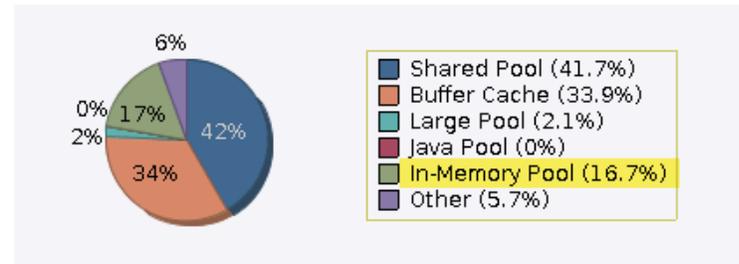

Current Allocation

! Automatic Shared Memory Management does not apply to the In-Memory pool.

Automatic Shared Memory Management Enabled

Total SGA Size (MB)

SGA Component	Current Allocation (MB)
Shared Pool	1280
Buffer Cache	1040
Large Pool	64
Java Pool	0
In-Memory Pool	512
Other	176

Checking the In-Memory Pool

```
SQL> select OWNER, SEGMENT_NAME, POPULATE_STATUS, bytes_not_populated from v$im_segments;
```

```
no rows selected
```

```
SQL> select POOL, ALLOC_BYTES/1024/1024 ALLOC_MB, USED_BYTES/1024/1024 USED_MB, POPULATE_STATUS from V$INMEMORY_AREA;
```

POOL	ALLOC_MB	USED_MB	POPULATE_STATUS
1MB POOL	1423	0	DONE
64KB POOL	608	0	DONE

```
2 rows selected.
```

Loading Tables into Memory

Data set and query examples
are from OOW Database
In-Memory Hands-On Lab

```
SQL> alter table ssb.date_dim inmemory;
Table altered.

SQL> alter table SSB.SUPPLIER inmemory;
Table altered.

SQL> alter table SSB.CUSTOMER inmemory;
Table altered.

SQL> alter table SSB.PART inmemory;
Table altered.

SQL> select count(*) from SSB.CUSTOMER inmemory;

  COUNT(*)
-----
      60000

SQL> select count(*) from SSB.LINEORDER;

  COUNT(*)
-----
  11997996
```

Loading Tables into Memory

```
SQL> select POOL, ALLOC_BYTES/1024/1024 ALLOC_MB, USED_BYTES/1024/1024 USED_MB, POPULATE_STATUS from V$INMEMORY_AREA;
```

POOL	ALLOC_MB	USED_MB	POPULATE_STATUS
1MB POOL	1423	569	DONE
64KB POOL	608	5.25	DONE

```
SQL> select OWNER, SEGMENT_NAME, POPULATE_STATUS, bytes_not_populated from v$im_segments;
```

OWNER	SEGMENT_NAME	POPULATE_STAT	BYTES_NOT_POPULATED
SSB	DATE_DIM	COMPLETED	0
SSB	CUSTOMER	COMPLETED	0
SSB	LINEORDER	COMPLETED	0

Or simply load all objects in a tablespace

```
SQL> ALTER TABLESPACE TS_DATA default INMEMORY PRIORITY CRITICAL DISTRIBUTE AUTO FOR SERVICE DEFAULT DUPLICATE ALL;  
Tablespace altered.
```

Compression Example

```
SQL> SELECT v.owner,  
2         v.segment_name          name,  
3         v.bytes                 on_disk_size,  
4         v.inmemory_size        in_mem_size,  
5         ROUND(v.bytes / v.inmemory_size, 2) comp_ratio  
6 FROM   v$im_segments v  
7 ORDER BY 4;
```

OWNER	NAME	ON_DISK_SIZE	IN_MEM_SIZE	COMP_RATIO
SSB	SUPPLIER	393,216	1,310,720	.3
SSB	DATE_DIM	131,072	1,310,720	.1
SSB	CUSTOMER	5,586,944	5,505,024	1.01
SSB	PART	32,292,864	8,650,752	3.73
SSB	LINEORDER	817,586,176	595,329,024	1.37

Other Interesting In-Memory Options

Active Data Guard In-Memory

- ✓ In-Memory can be configured separately
- ✓ ALTER TABLE ... INMEMORY FOR SERVICE ...

RAC In-Memory

- ✓ Each Node has own column store
- ✓ INMEMORY_DISTRIBUTE column of in-memory views

Query Examples

```
SQL> select
  2   max(lo_ordtotalprice) most_expensive_order,
  3   sum(lo_quantity) total_items
  4 from
  5   LINEORDER;
```

```
MOST_EXPENSIVE_ORDER TOTAL_ITEMS
-----
          55528516      305976330
```

Id	Operation	Name	Rows	Bytes	Cost (%CPU)	Time
0	SELECT STATEMENT				24378 (100)	
1	SORT AGGREGATE		1	9		
2	TABLE ACCESS FULL	LINEORDER	11M	102M	24378 (1)	00:00:01

In-Memory Explain Plan

Id	Operation	Name	Rows	Bytes	Cost (%CPU)	Time
0	SELECT STATEMENT				993 (100)	
1	SORT AGGREGATE		1	9		
2	TABLE ACCESS INMEMORY FULL	LINEORDER	11M	102M	993 (9)	00:00:01

✓ 1.02 sec vs .03 sec In-Memory

Query 2 – Normal Plan

```
SQL> select    lo_orderkey, lo_custkey, lo_revenue
2 from        LINEORDER
3 where       lo_orderkey = 5000000;
```

LO_ORDERKEY	LO_CUSTKEY	LO_REVENUE
5000000	9730	1634013

Id	Operation	Name	Rows	Bytes	Cost (%CPU)	Time
0	SELECT STATEMENT		4		24333 (100)	
* 1	TABLE ACCESS FULL	LINEORDER	4	68	24333 (1)	00:00:01

Predicate Information (identified by operation id):

```
1 - filter("LO_ORDERKEY"=5000000)
```

Query 2 – In-Memory Plan

```
-----  
| Id | Operation          | Name      | Rows | Bytes | Cost (%CPU)| Time      |  
-----  
|  0 | SELECT STATEMENT   |           |      |      |  959 (100)|           |  
|*  1 | TABLE ACCESS INMEMORY FULL | LINEORDER |     4 |    68 |  959   (6)| 00:00:01 |  
-----
```

Predicate Information (identified by operation id):

```
-----  
1 - inmemory("LO_ORDERKEY"=5000000)  
   filter("LO_ORDERKEY"=5000000)
```

✓ .61 vs .02

✓ HOL has example with Index

Query 3 – Normal Plan

```
SQL> select
  2   sum(lo_extendedprice * lo_discount) revenue
  3   from
  4     LINEORDER l,
  5     DATE_DIM d
  6   where
  7     l.lo_orderdate = d.d_datekey
  8     and l.lo_discount between 2 and 3
  9     and l.lo_quantity < 24
 10     and d.d_date='December 24, 1996';
```

```
REVENUE
-----
2049020339
```

Id	Operation	Name	Rows	Bytes	Cost (%CPU)	Time
0	SELECT STATEMENT				24425 (100)	
1	SORT AGGREGATE		1	43		
* 2	HASH JOIN		417	17931	24425 (1)	00:00:01
* 3	TABLE ACCESS FULL	DATE_DIM	1	25	15 (0)	00:00:01
* 4	TABLE ACCESS FULL	LINEORDER	1003K	17M	24408 (1)	00:00:01

Predicate Information (identified by operation id):

```
-----
 2 - access("L"."LO_ORDERDATE"="D"."D_DATEKEY")
 3 - filter("D"."D_DATE"='December 24, 1996')
 4 - filter(("L"."LO_DISCOUNT"<=3 AND "L"."LO_QUANTITY"<24 AND
           "L"."LO_DISCOUNT">=2))
```

Query 3 – In-Memory Plan

Id	Operation	Name	Rows	Bytes	Cost (%CPU)	Time
0	SELECT STATEMENT				1089 (100)	
1	SORT AGGREGATE		1	43		
* 2	HASH JOIN		417	17931	1089 (17)	00:00:01
3	JOIN FILTER CREATE	:BF0000	1	25	1 (0)	00:00:01
* 4	TABLE ACCESS INMEMORY FULL	DATE_DIM	1	25	1 (0)	00:00:01
5	JOIN FILTER USE	:BF0000	1003K	17M	1085 (17)	00:00:01
* 6	TABLE ACCESS INMEMORY FULL	LINEORDER	1003K	17M	1085 (17)	00:00:01

Predicate Information (identified by operation id):

```
2 - access("L"."LO_ORDERDATE"="D"."D_DATEKEY")
4 - inmemory("D"."D_DATE"='December 24, 1996')
   filter("D"."D_DATE"='December 24, 1996')
6 - inmemory(("L"."LO_DISCOUNT"<=3 AND "L"."LO_QUANTITY"<24 AND
             "L"."LO_DISCOUNT">=2 AND SYS_OP_BLOOM_FILTER(:BF0000,"L"."LO_ORDERDATE")))
   filter(("L"."LO_DISCOUNT"<=3 AND "L"."LO_QUANTITY"<24 AND
             "L"."LO_DISCOUNT">=2 AND SYS_OP_BLOOM_FILTER(:BF0000,"L"."LO_ORDERDATE")))
```

✓ .88 vs .02 sec

✓ Bloom filter example

Final Thoughts

- ✓ Easy setup
- ✓ No application changes
- ✓ Most useful for analytical queries, but will also help other operations
- ✓ Allows removal of some indexing
- ✓ Single database can now support mixed workload
